Profile

A passionate and driven backend developer with a strong focus on building intelligent systems that address real-world challenges. Skilled in full-stack web development, machine learning, and database design, with a proven ability to integrate software engineering and AI to deliver innovative, user-centric solutions. Dedicated to continuous learning and applying emerging technologies to create scalable, efficient, and future-ready applications.

Education

Amrita Vishwa Vidyapeetham , BTech in Computer Science(AI)	Aug 2023 – current
• CGPA: 8.31/10	
Aravinda VidyaMandiram ,Higher Secondary	June 2021 – April 2023
• Percentage: 88.2	
Aravinda VidyaMandiram ,Secondary	Feb 2020 – April 2021
• Percentage: 87.8	

Experience

Flutter Intern	July 2025 – Present
Amrita CREATE (Center for Research in Analytics, Technologies and Education)	
• Migrated the legacy Indian Sign Language web platform into a cross-platform mobile application using Flutter. • Designed and implemented an accessibility-first user interface tailored for the hard-of-hearing community. • Developed interactive sign language learning modules and educational mini-games to improve user engagement.	
Project Trainee	Oct 2025 – Nov 2025
Kerala Water Authority (Public Health Division, Kollam)	
• Developed a project titled <i>Smart Automated Pumping System (SAPS)</i> for automated water pump control and monitoring. • Performed system requirement analysis, module design, implementation, testing, and documentation. • Implemented SMS-based monitoring functionalities for real-time system status updates.	
ACM (Association for Computing Machinery) Student Chapter	Oct 2023 – current
• Current Web Master and Treasurer • Working on Club Websites • App and Web Development Member	

Projects

Autonomous GPS-Based Delivery Drone	2025 December
• Developed an autonomous GPS-based delivery drone using Pixhawk 2.4.8 for automated navigation, payload drop, and return-to-home operation. Implemented a mobile web interface to send real-time GPS coordinates and trigger autonomous delivery missions. Designed Python-based flight control using DroneKit and MAVLink with a servo-based payload release mechanism. • Languages and frameworks Used: Python, DroneKit, PyMAVLink, Flask, HTML, JavaScript, Pixhawk, GPS, IoT	
ACM recruitment portal	2025 July
• Built a full-stack recruitment portal using React + Tailwind CSS (Frontend) and PHP + PostgreSQL (Backend) with secure REST APIs, authentication, role-based access, task management, submissions, and application status	

tracking. Implemented admin and student dashboards with a complete recruitment workflow and responsive UI.

- Languages and frameworks Used: React , PHP , PostgreSQL

Learning Management system

2025 May

- Developed Learning Management system for students, in which the teacher can create course, assignments, quizzes , monitor student progress , grade assignments, add points to students ,etc. The students can view courses,download and view course resources, submit assignments, can view their assignment grade, attend quizzes, view their progress etc.
- Languages and frameworks Used: go, react, mongodb, express, firebase

Parkinson's Disease monitoring System using iot

2025 April

- Developed IOT-based Parkinson's monitoring device. It is a wearable device and it record the tremor details of the patient constantly and send it to mobile app which can be used by caretaker or family members. If the device records a high tremor , it saves the data in cloud and immediate alerts are send.
- Languages and frameworks Used: C, Flutter ,Firebase ,IOT devices(ESP32, sensors etc)

Train Ticket Booking Website

2024 December

- Developed a mock train ticket booking website featuring OTP-based user authentication, train search and filtering, ticket booking with passenger detail management, a simulated payment workflow, and automatic generation of downloadable e-tickets, providing a complete end-to-end booking experience.
- Languages and frameworks Used: Html, css, javascript, mongodb, express

Teacher Points Portal

2024 September

- Developed a Teacher Points Portal using Go, Gin, and MongoDB to manage events, roles, and teacher assignments with auto-allocation, personalized dashboards, leaderboard tracking, notifications, and CSV report generation.
- Languages and frameworks Used: go, react, mongodb, express

Soft Skills

Languages Known: English ,Malayalam (Native) ,Hindi ,Tamil

Soft Skills: Teamwork and Collaboration, Adaptability ,Problem-Solving ,Work Ethic

Technologies

Languages: Python, C++ , C, Java, SQL, HTML, CSS, JavaScript, GO, PHP

Frontend Frameworks: React, Angular

Backend Frameworks: Node.js, Express.js, Flask, Go

Database Systems: MySQL, PostgreSQL, MongoDB, Firebase

Mobile Development: Android Studio, Flutter ,REST APIs

Cloud Platforms: Google Cloud Platform, Vercel

API Tools: Postman

HACKATHONS AND EXTRACURRICULARS

Nasa Space App challenge

2024

- Developed a website for showing details of Geomagnetic Storm and send alerts according to it.

Evolumin

2024

- Volunteered as the venue coordinator for the entire event.

Olabs Hackathon

2025

- Volunteered as the Venue and Electrical Coordinator for the entire event, managing setup logistics, power arrangements, and smooth execution of all technical requirements.

ACM Summer School

2025

- Coordinated the ACM Summer School program, managing sessions and logistics to ensure smooth execution
- Taught Python fundamentals to school students, introducing programming concepts through hands-on exercises and Guided students in developing problem-solving skills and building a strong foundation in computer science.
